Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

14. Make a screen capture showing the **bmon** results for the ping flood used to demonstrate a volumetric DoS attack.

Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

18. Make a screen capture showing the **bmon** results for the second ping flood used to demonstrate a volumetric DoS attack.

Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

24. Make a screen capture showing the output for the hping command used to demonstrate a protocol-based DoS attack.

The screenshot shows a Kali Linux terminal window with the title bar "DoS Attacker". The terminal output displays the results of a ping and a hping3 flood attack on drisst.org. The ping command shows 0% packet loss. The hping3 command, configured with 80 SYN packets, shows 100% packet loss, demonstrating a successful protocol-based Denial-of-Service attack.

Part 3: Conduct a DDoS Attack

Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

3. Make a screen capture showing the drisst.org webpage.

Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

21. Make a screen capture showing the **failed connection to drisst.org**.

23. Make a screen capture showing the **“PF states limit reached”** error message.

Performing a Denial-of-Service Attack

Cyberwarfare: Information Operations in a Connected World, Second Edition - Lab 01

Challenge and Analysis

Make a screen capture showing the **peak traffic** generated in **bmon** while performing a DDoS SYN flood attack.
